Think it doesn't matter if your employees get a COVID vaccine? Think again!

Unvaccinated workers pose a health and safety risk

- Compared with people who are vaccinated and boosted, unvaccinated people are:
  - 5X more likely to get COVID
  - 16X more likely to need hospital care from COVID
  - 68X more likely to die from COVID

Unvaccinated workers affect productivity

- Many industries are experiencing staffing shortages because workers are out sick with COVID.
- Unvaccinated people should stay home from work and quarantine for at least 5 days if they're exposed to someone with COVID.

Unvaccinated workers affect your bottom line

- Unvaccinated people account for most COVID-related hospitalizations, which drives up the cost of employer-sponsored health insurance.
- Unvaccinated people who get COVID are much more likely to get long COVID, resulting in more short-term disability payments and a potential need for workplace accommodations.
- The COVID pandemic—now mainly a pandemic of the unvaccinated—is contributing to higher costs for goods and services across industries as issues of supply and demand persist.

Get vaccinated

It's the best way to help protect yourself and others against severe illness and death from COVID.

You have 3 ways to find free, safe, and effective vaccines near you:

- Go to vaccines.gov
- Text your ZIP code to 438829
- Call 1-800-232-0233
